

Track 1: Innovation and Critical Learning in Business & Education

Teaching Economics in Greece

Spyridon Mamalis, Eleni Tsami
TEI KAVALAS, Kavala (GR)

The aim of this paper is to briefly explore the university economic education in Greece in relation to new technologies. The Greek reality appears ready to accept a more substantial use of new technologies in the educational procedure both at schools and Universities. This is made clear by the positive attitude of teachers of economics towards ICT. However, many important problems come up, mainly as to teacher training and the familiarization of students with this new methodology.

Friday 8 October 9:00 – 10:30
